" But no one is immune to jet lag. How to handle it? LOST Jet lag is not necessarily inevitable. Since there are many different factors that can influence your travel, it is extremely important to have a complete understanding of the condition of your body. It is not only necessary to determine what the causes of the condition are, but also what you can do to prevent them from causing damage to your body. The two most important things to do when you are traveling are to drink plenty of water and get plenty of sleep. If you have a long flight, make sure to keep up on the sleep you are able to get during the flight. It is advisable to try to sleep during the daytime and to take naps, since you will be less able to get enough sleep on the flight. You should also drink water before and during the flight to avoid the effects of dehydration. You may also feel hungry during the flight, but do not let it get to the point where it threatens to affect your health. Remember to eat small meals, but do not eat too much. There is no need to feel hungry during the flight. It is best to eat small meals with frequent smaller snacks. When you start to feel drowsy, especially during the takeoff and landing, it is advisable to sit near the front of the plane. The less distance you have to travel, the less chance you have to feel jet lag. It is also good to make sure that the seat belt is loose, but also to make sure that the window is not closed too much. When you get to your destination, do not try to move too quickly or to do anything that is too exhausting. It is best to have the day off at the end of your flight, especially if you arrive in the afternoon or early evening. You should be able to get plenty of rest the day you arrive. The day of arrival should also be your last day of travel. If you want to travel back home, you should go back to your original destination and then take a day or two off to get
