The drawing area contains the title bar, where the title of the drawing is displayed. In the top-right corner of the window is the drawing tools bar, which includes the drawing tools menu and the drawing tools. You can use the drawing tools to modify the active drawing. ## What's New In?

Markup Import and Markup Assist, Version 4, is a new import and markup assistant feature that works in concert with our new Markup Interface for AutoCAD 2023. This new feature is designed to streamline the review and incorporation of feedback from printed paper or PDFs into your AutoCAD drawings. The feature provides a clean way to import and incorporate feedback by acting as a dynamic, automated process for sending and receiving information. Review screen. To see how Markup Import and Markup Assist works, start by bringing up a file in your drawing. Using this file, the feature will export a static version of the drawing with any comments added to the drawing. Then you can import this static copy into your drawing. From there, you can incorporate the imported comments into the drawing by simply updating the file to reflect any changes made to the static copy. The new Markup Import and Markup Assist uses the same process to import comments from paper or PDFs. First you import the static copy of the paper or PDF, and then you can add or modify comments as appropriate. The comments are directly imported and updated in your drawing. You can also export a static copy of your drawing with the imported comments, and then you can import that static copy into your drawing. There is no need to save a copy of your drawing to your hard drive or the cloud. The new Markup Import and Markup Assist feature is fully integrated into your drawing. When you import feedback from paper or PDFs, the feature will automatically import any comments and notes attached to the paper or PDF. This integration means that you can use the new Markup Import and Markup Assist feature from any device you can use AutoCAD. The feature also provides a new Markup Interface, which supports adding and viewing comments. The Markup Interface provides a clean, graphical view of a paper or PDF, letting you easily add comments and make edits to the paper or PDF. You can simply drag-and-drop an object onto the comment box to place it into the comment. As the comments are being added, they appear in a status bar along the bottom of the interface. You can select any comment in the drawing and insert it into the drawing at a specific location using the annotate command. Markup Interface.
