Architecture AutoCAD Architecture is a CAD package, software that can create architecture projects. It was introduced in version 2010. It is powered by ObjectARX for object-oriented programming, with Autodesk technologies. Classification of functions As of Autodesk Inc. 2017: Plugins There are numerous third-party plugins available to expand functionality. Most of these are available through the Autodesk Exchange Apps store. For example, the SharePoint plug-in allows sharing of projects in real-time with a SharePoint workspace. The design automation tools are built into AutoCAD and are often described as CAD plug-ins. These allow for much easier use of the automation functions. For example, they can be used for custom model creation, 2D/3D drawings, business processes, and production management. Architecture AutoCAD Architecture, an add-on for the AutoCAD CAD package, was originally developed by Stan Lasick and was introduced in version 2015. It allows the ability to collaborate in real-time on projects, including model validation, virtual drawing creation, and annotation. The Architecture design environment is a CAD package that has many features, most notably: 2D, 3D and MEP (Mechanical, Electrical, Plumbing) design that can be created and edited in a single application. Model and schedule sharing functionality between multiple users and organizations. Integration with the AutoCAD application via the DXF format for importing and exporting model information. Integration with the Microsoft SharePoint web application. Animation AutoCAD is capable of animation. These animation functions can be used to animate components of the 3D drawing objects. They can be used to model, animate objects and enable interactive 3D visuals of objects, components and geometric features. Some of the common functions of this feature include: Interpolation Reverse animation 3D rotation, translation, and scaling AutoCAD also has features that make it easier to animate 2D objects. These include: Snap To On the Fly Wireframe Bill of Materials (BOM) BOMs are used to
