I could download the files with wget manually, but the download speed is really slow compared to the default downloader. I use Opera 9.50. So its a problem with the installation? Having the same issue as many others. I originally installed the OGet installer and then downloaded and installed OGet. After that there was no more connection to the official OGet site but the OGet menu bar icon shows up. I tried completely uninstalling the original OGet which caused the OGet menu icon to also be removed. The only item in my Opera menu that is still there is the icon for OGet. The OGet website is unable to be reached via browser and the OGet error screen shows. Cannot find and unblock a download. Installed OGet 3.0 on Vista x64. OGet menu icon in Opera's upper-left corner, but no downloads happening. Can't access Opera's web page either, but I have full Internet access on my Vista x64 machine. (I'm on broadband.) Download manager removes the download menu from the browser but continues to work silently in the background
