CAD, the abbreviation for computer-aided design and drafting, is a set of design-related computer software applications. They are used to visualize complex designs, such as mechanical systems, structures, electrical systems and electronics, architectural systems, and to streamline and automate common drawing and modeling tasks. CAD is a tool that allows you to draw and design using a computer. A designer does this by entering a design or model and creating views (angle, elevation, and section) of this design. The design is then presented to the engineer, who then reviews and modifies the design. Finally, the engineer is able to print the drawing, send it off for fabrication or put it on paper and cut it up. CAD is extremely useful when producing building drawings as it allows for buildings, structures, or machinery to be designed and represented without the need for manual drafting, sketching, or fabrication of paper drawings. This saves a lot of time and money for clients, and saves a lot of trees. AutoCAD is also referred to as AutoCAD LT.

AutoCAD is used for all types of designs: Architects, Engineers, Surgeons, Graphic Artists, CAD Models, Mechanical, Electrical, and Electronic Designs. AutoCAD allows you to use geometry modeling for the design of your model. There are many ways to start using AutoCAD: through a Microsoft Windows platform, through a Mac OS platform, or through a web interface. The latest version is AutoCAD 2016.2 and it has been available since October 30, 2016. AutoCAD Architecture For this tutorial, I will focus on AutoCAD Architecture. AutoCAD Architecture allows the user to create and manipulate objects for 2D architectural drawings using the 2D Drafting environment. AutoCAD Architecture provides features that are primarily for designing a building. The user is able to design a building in architectural drafting by creating and manipulating floor plan, section, elevation, and perspective views. The user also has the ability to create and manipulate more than 6,000 components and create relationships between them. Here are some of the most important points to remember before you start using AutoCAD Architecture: AutoCAD Architecture requires the use of the most current release of AutoCAD or its previous release. AutoCAD Architecture provides a 2D drafting environment. AutoCAD Architecture is designed for architectural drafting. Unlike AutoCAD,

Visual LISP is a scripting language, a kind of LISP, developed by Autodesk and available for AutoCAD. It provides functions for easy automation of common tasks. This is used for adding new functionality to AutoCAD in a user-friendly way, to provide custom functions and visual cues for regular users of AutoCAD. VBA is a Microsoft Visual Basic for Applications (VBA) which is a scripting language similar to Visual LISP but it is limited to Microsoft Office products. The AutoCAD product family has support for VBA programming. VBA is the scripting language of choice for most AutoCAD users, as it is commonly used for programming macros that manipulate AutoCAD drawings. VBA also supports communication with other Microsoft Office applications. AutoCAD 2007 introduced VBA object-oriented programming (VBA-OO). VBA-OO is a feature in AutoCAD that enables Visual Basic For Applications developers to create classes. It also provides a macro object that can be invoked from VBA. thus AutoCAD may be programmed using .NET programming languages. After more successful products (Civil 3D and AutoCAD LT), Autodesk tried to make it easier for .NET developers to write their code for AutoCAD.
