## **AutoCAD [32|64bit]**

AutoCAD originated from two distinct predecessor products, PostScript CAD and TurboCAD. In 1985, Autodesk acquired PostScript CAD from Adobe Systems, and in 1985, Autodesk acquired TurboCAD from Maxon. Autodesk continued to develop and market the two products as separate products with Autodesk claiming that they were "the first desktop CAD programs to deliver integrated 2D and 3D CAD capabilities". AutoCAD (as it was called at the time) became the first widely used CAD program for graphic designers, and in the early 1980s, became one of the first widely used CAD programs for desktop publishing (DTP). With the introduction of AutoCAD version 10 (Autodesk (now Autodesk) PostScript CAD and AutoCAD (now Autodesk) TurboCAD were discontinued, and only Autodesk AutoCAD was sold as a desktop app. In the late 1990s, Autodesk began to market AutoCAD as a multimedia, cross-platform design application. With the introduction of AutoCAD r14, the program introduced the Block Manager. This was expanded upon with AutoCAD r15 to allow a second block manager window to be displayed on the screen. AutoCAD continued to gain popularity and its sales and market share increased rapidly. However, after three years of continued release and growth, the company, which had earned over \$1 billion in 1989, was plagued by excess inventory and problems with its software license management system, resulting in substantial over-expansion and financial loss. History In the 1970s and 1980s, CAD software was usually owned by a small group of users, each using their own specialized software on a separate workstation. Since users typically worked with only a single type of modeling data, they also tended to use only a single modeling tool, such as for example a drafting tool (pencil, ruler, and protractor), a drafting table (analog or digital), and a pointing device (mouse, trackball). While a corporate or government graphics department may have purchased a large batch of

software, these products usually had to be separately purchased by each individual user. In the 1970s, the use of mainframe and minicomputer-based CAD systems was still in its early stages. Before the appearance of the first desktop CAD software, CAD programmers had to compile the software on mainframes and use a dedicated graphics terminal to display the results on
