Field of the Invention The present invention relates to a hinge assembly for use on a railcar door or other closure element and, more particularly, to a hinge assembly having an improved pivot and drive linkage arrangement to provide a more positive actuating action. 2. Description of the Prior Art It is well known to provide railcar doors with an overhead door for covering an opening in a carbody. The door may have a swing-type or a slide-type door opening. Generally, such doors are provided with a track assembly on one side of the door opening. The door is supported on the track assembly and a conventional fixed hinge assembly is mounted to the carbody at the edge of the door opening. The door is pivotally supported by the conventional hinge assembly and
