A: The first and last are just strings, i.e., lists of characters. The numeric ones are just integers. You can decode them to get the results you want: import re decoded_text = re.sub(r'[^0-9]', '', text) decode = {int(x):x for x in re.findall(r'\d+', decoded_text)} for value, name in decode.items(): print(name, value) Output: 23 5 1 4 3 28 42 43 48 51 10 34 11 45 38 47 16 41 17 43 20 45 42 43 44 47 15 35 27 43 35 45 47 50 25 34 11 46 14 44 16 43 17 40 23 47 41 42 25 41 28 51 35 42 46 47 45 39 43 47 46 39 47 52 44 47 42 46 52 40 35 46 46 39 46 40 46 50 43 46 46 43 54 45 46 49 53 45 46 39 49 53 46 49 45 41 42 45 46 41 52 41 46 48 54 45 46 46 41 50 48 50 52 40 49 51 45 52 43 50 51 46 You could also use json.loads instead of re.sub if you'd rather not rely on the actual contents of

the strings. The remainder of the strings, starting from "3d" and ending with 43, are all integers, which are decimal numbers. You can also use regular expressions in the same way as before. They can be processed by using a raw string, or using the r flag to make the raw string. The raw string could be written: r'[0-9]*[0-9]*\d\d\d\d' Or it could be written: r'[0-9]*[0-9]*\d\d\d\d' It would match strings with exactly four digits, so it'd only match one of the above strings. EDIT: If there are nine of them in each file and each has a unique ID then you could write a regular expression that checks the string contains all nine digits followed by a new

After the dismantling of the San Francisco pit,

which had gone into service in 1929, most of the upper and middle levels remained, as can be seen in the picture above. A third pit, perhaps the deepest of the three, now contained most of the material mined from the middle and lower levels of the first pit. After the demise of the Baker Bandit and Prohibition, the San Francisco Army Base had become a naval air station. It was by now largely abandoned and had grown into a large, open expanse of dirt known as Overlook Hill. There is an interesting story about one of the trains that was pulled out from the San Francisco pit: A replica of the train has been built and is being used as an exhibit in a museum at the site. References San Francisco Pit, Crustal-M, page 2. External links Category:Underground mines in the United States Category:Buildings and structures in Boulder County, Colorado Category:Boulder County, Colorado Category:Mining in Colorado What Kind of Cleaning Products Do You Use? - adit_pal ====== ColinWright Just so everyone is clear - it's a false dichotomy. There are some pretty cheap cleaning products, some expensive, some specialised, some standard, some even a bit nasty. Use what works best for you. Assessing malingering in chronic traumatic brain injury using the MMPI-2 Multiprofile. The current study

assessed the ability of the Minnesota Multiphasic Personality Inventory-2 (MMPI-2) to detect malingering in individuals with chronic traumatic brain injury. Performance on the MMPI-2 was compared across three groups of participants: (1) individuals in an inpatient brain injury clinic who met criteria for at least moderate impairment due to a TBI; (2) members of the general public recruited from two education and training websites; and (3) individuals recruited from two education and training websites who met criteria for malingering. As part of a broader investigation that focused on evaluating multiple hypotheses of malingering, performance on the MMPI-2 was compared across the three malingering groups and the three impairment groups. The MMPI-2 subsc
