Wondershare Data Recovery 6.0.0.31 + Crack. If you forget a password or your master password is locked, the recovery tool helps you get a . Q: Changing color of active element based on its primary source I am working on a form that is being used as a dynamic modal. When a user submits the form I save the contents of the form in an array. When the page is refreshed the array is loaded into the model. As long as the element is in the array I want the active element to be red. I use the class "message" for my modal.
