Apple advertised AutoCAD as "Microsoft's CAD competitor", and the two companies developed a "multimedia architecture" to deliver AutoCAD on the Apple Macintosh. AutoCAD first ran on the Macintosh in 1987, supporting the Apple LaserWriter and Apple PostScript. In 1990, the first public release of AutoCAD for Macintosh was produced, with support for Photoshop and TIFF files. Since the introduction of AutoCAD, the AutoCAD package has added support for other common image formats, such as GIF and JPEG, as well as various other file formats. The software also has many third-party plugins, which allow users to perform non-AutoCAD functions. Currently, AutoCAD is available for Windows and macOS, and web and mobile versions, supporting cloud storage and connectivity. It is one of the most widely used commercial CAD applications on a variety of platforms. Overview The initial release of AutoCAD was limited to the Apple II, Apple LaserWriter and Apple PostScript. A special form of the AutoCAD package was also available for the BBC Micro (1983). AutoCAD also released a PC-only version called AutoCAD XL. AutoCAD was originally made available as a standalone application; later, it was added to the OS as a drawing component. The first release of AutoCAD for Macintosh was in 1990. It was developed with the Apple Macintosh II, Macintosh Plus, Mac SE and Mac LC. AutoCAD is not an entirely closed platform, however. The ability to use AutoCAD as a CAD application is restricted only to licensed customers of the software. In 1992, AutoCAD began releasing a subscription-based option called AutoCAD LT, which was intended for smaller businesses. This became a major source of revenue for Autodesk. AutoCAD LT is a major component of the 2014 version of AutoCAD, and is currently the most widely used desktop, web and mobile version. AutoCAD LT 2017 was released in August 2017. History 1980s Work on the Apple II version of AutoCAD began in late 1983, although the first version to be released was AutoCAD II, released for the Apple IIGS and the Macintosh in December 1987. The Apple II version of AutoCAD had limited multi-user support. Its share of the market was limited to an estimated 3000 users at the time. As this number approached the market for general-purpose
