Download PPSPPP ( PPSPPP on .Q: Show that the isomorphism depends on the concrete choice of primitive idempotent \$p\$. Suppose \$R\$ is an integral domain with \$1\$ (unless otherwise specified) and \$p\$ is a primitive idempotent of \$R\$. I am trying to show that \$R \cong pR\_p\$ where \$e\_p\$ is the primitive idempotent of \$R\$ associated with \$p\$. Can someone tell me how to get from here? Thanks for your help A: If you have any nice way of showing that \$pR\_p\$ is a ring isomorphic to \$R\$ via the obvious map then the desired isomorphism is the map \$\varphi: pR\_p \rightarrow R\$ defined by \$re\_p \mapsto pr\$. This map is an isomorphism as the only questions you need to answer are about its linearity

Omega-Sequences:  $\forall a \in \mathbb{R}, \exists n \in \mathbb{N} : a \leq 2^n$  It seems to me that the above statement is equivalent to:  $\forall a \in \mathbb{R}, \exists m \in \mathbb{N} : a \leq \Omega(m)$  How do the \*-Sequences and Omega-Sequences interact? A: Well, I'm not entirely sure what your problem is, but to see that the above two statements are equivalent, take some  $a \in \mathbb{R}$ , and let  $n$  be the smallest integer with  $a$
