DICOM_Dir

- It will create a DICOMDIR file for every directory (folder) that is dragged on it. - A DICOMDIR file for each directory dragged on it, can be "opened" to list its contents like a normal directory and to copy it to another directory or web server. - A "ShowIcon" button on the root directory will show the created DICOMDIR file as a symlink. - Draggable folders (directories) without DICOM files will have a small "?" icon on their icon bar. - Folder size on the root directory is limited to the maximum amount of DICOM part 10 files (max 32.000 files). - The application will also show the number of files in each directory by default. You may also want to check out the open source DICOMVERTRIB utility (Dropbox). Key features ----- - DICOMDIR creation for every directory you drag over it (try dragging a directory on the interface, you will see). - Drag and drop unlimited directories on the interface to create

DICOMDIR files for every directory. - Files in each directory will be listed on the root directory. - DICOMDIR file can be opened to list its contents, search for filenames, sort by date, etc. - Show the size of a directory on the root directory. - Drag a file on the root directory and create DICOMDIR file for that. - Drag file on root directory to create DICOMDIR file. - Create DICOMDIR files for each directory. - Sort DICOMDIR files based on their creation date. - "Move a file" by dropping it on the root directory. - "Copy a file" by dropping it on the root directory. - "Delete a file" by dropping it on the root directory. - "Help" application to get more info. - The application has been tested with a Mac (G4). Supported OS: - Mac OS X (V10.6.6-10.8.5) - Windows XP (V32) and higher Change log ----- - 4.0 (14.11.2014) (released as a public application) - 3.9 (08.10.2014) - 3.8 (06.10.2014) - 3.6.3.5

What's New in the DICOM_Dir?

- it is a simple program, - it doesn't need any start-up files. It is small and only requires 16 MB of RAM. - you just drop a directory on its interface, it extracts the directory structure and creates a DICOMDIR file for each child directory. - it is the best and the easiest way to create a DICOMDIR file. - it works for DICOMDIR files created by DICOM Systems Inc. Use of DICOMDIR Files The DICOMDIR file is the only way to store information about the DICOM Part10 files that exist on your computer or server in the most efficient way. DICOMDIR files can then be easily used by any DICOM software. DICOMDIR files are specially formatted files written in a 2.1 format. Therefore, DICOMDIR files are portable across the various versions of DICOM software that exist. The DICOMDIR file can save the following information: - Patient Name: the information regarding to patient who has these images - Study Description: the information regarding to study description that is used to identify the images - Study Time: the information

regarding to study start time - Acquisition Time: the information regarding to acquisition time - Scanner Type: the information regarding to scanner type - Image Type: the information regarding to image type (repetition, reconstruction, etc.) - Medical Facility: the information regarding to facility which has this study - Study: the information regarding to study which has these images - Study Instance (e.g. Study ID, Study/Scan ID, Study/File ID, and Study/Real File ID): the information regarding to images in a series of the same study If the study was performed in a DICOM based PACS, there will also be the information regarding to the PACS Client, as well as the PACS Server. How to Create DICOMDIR File After you have created DICOMDIR files for all the DICOM Part 10 files you want to persist, you can now take a look at the various programs that are designed to help you explore, display and manipulate DICOMDIR files, including: - DICOM Explore: With DICOM Explore, you can browse or search through

all the DICOMDIR files available on your PC or server. You can easily browse through them by tagging

System Requirements For DICOM_Dir:

Compatibility: Windows 7/8/10 - 64bit Mac OS X - 10.8.4 or higher Linux - CPU: 1.8Ghz or higher; RAM: 8G or higher; Video: 512MB or higher

- 1) Create a folder named “my_maps” on your desktop.
