Adobe Photoshop 2015 Use Photoshop for Image Manipulation As one of the few image-editing programs that allow you to work with both color and monochrome images, Photoshop has a unique set of tools that enable the user to manipulate, alter, and enhance images and their color content in many ways. In particular, it was designed for photos and graphics, so it's a program you can use to make your content look more professional. It can be difficult to learn the ins and outs of a program such as Photoshop, but it can be done. The following are the Photoshop key features that you can use to create your own images.

**Transform** The Transform feature allows you to resize and stretch your images. You can scale it up and out and stretch the edges and corners so it looks more realistic. **Create Complex Effects** You can easily create complex effects by overlaying multiple layers, such as one for a color layer, another for a photo layer, and a third for a video layer. You can add and remove layers to achieve the effect that you want. **Adjust Color** The Adjust Color feature allows you to fine-tune the colors in your image. It allows you to make adjustments in the saturation, brightness, and contrast of your image. **Adjust Lighting and Shadowing** You can tweak the lighting in your photos using the Shadows and Highlights. It's an easy way to sharpen the contrast and add light. There's also a tool to give your image a glowing effect, which is perfect if you want to apply that special glow on to your image.

**Adjust Levels and Curves** You can use the Levels feature to darken or lighten your image or adjust the contrast. Using the Curves feature, you can adjust the tonal range and lighten or darken your image. **Colorize** The Colorize feature allows you to apply a color tint to any image. You can choose a color from a color palette or from the image and you can apply it to your image. **Blur** Blur helps you to soften or sharpen an image, depending on how much or how little you want to blur the edges of your subject. Choose from many different gradients, patterns, and textures to apply the effect. **Create Original-Looking Graphics** The Pen tool allows you to draw a path or shape. It's one of the most useful tools in Photoshop.

Effect of levofloxacin versus azithromycin on microbicidal activities of polymorphonuclear cells. Recent in-vitro studies have shown that levofloxacin interferes with the host microbicidal activity of polymorphonuclear cells (PMNs), such as neutrophils, against a range of bacterial species, including one of the most common cause of skin infections, *Staphylococcus aureus*. Similarly, azithromycin has been shown to exert anti-microbicidal effects against *S. aureus*, *Escherichia coli*, and *Propionibacterium acnes*. The aim of this investigation was to determine the ability of levofloxacin and azithromycin to induce changes in the antiseptic properties of human PMNs against methicillin-sensitive *S. aureus* (MSSA) and methicillin-resistant *S. aureus* (MRSA) in vitro. Human PMNs, obtained from healthy donors, were incubated with four different concentrations of each antibiotic for 60 minutes. A bactericidal activity assay, modified from the previously described lysozyme-cytochrome C-latex method, was used to assess the microbicidal activities of human PMNs in the presence and absence of two concentrations of levofloxacin or azithromycin, at an initial bacterial concentration of 10(5) cfu/mL. Concentrations of 200 and 400 mg/mL of levofloxacin (P For the past five years, the Southeastern Conference has rarely fallen out of the race for the national championship. But after Alabama (plus-4,633) and Georgia (plus-

### What's New in the?

Earlier today, we discussed the Lakers signing Nick Young to a two-year deal worth \$17 million dollars with a player option for the second year. A player option would give Young the opportunity to sign an extension next summer. While Young will be an important part of the team's plans in 2014-15, his presence in the backcourt will not likely affect Nick Calathes' minutes on the court. Calathes was the Lakers only other point guard on the roster and he appeared in 20 of the Lakers' first 21 games of the season. Calathes averaged 2.6 points and 3.0 assists in eight total games. Calathes played the first four games of the season off the bench, replacing Kendall Marshall, and averaged 10.0 points, 2.5 rebounds and 9.5 assists in 32.3 minutes of action. Calathes has shown he can contribute in a variety of areas for the Lakers, but his limited amount of floor time during the season doesn't make him a candidate for a bigger role. Calathes is a gifted passer and ball-handler, but he struggles with his shot and struggles to be effective as a shooter. He had a career low percentage (35.5%) from the field and a total of just 7 made 3-pointers. Calathes is a pass first point guard, and his ability to play multiple positions would allow him to be a part of any backcourt rotation. He doesn't need to be a scoring threat as he has shown the ability to make the right passes and make big time plays. Calathes is a more natural playmaker than Young, but the opportunities are few for Calathes to show his skills as a point guard. The Lakers currently have two point guards on the roster, Nick Young and Kendall Marshall, but if they trade for or draft a point guard next summer, Calathes will be in the backcourt when he's not playing power forward with the second unit. John Krolick's continued interest in the point guard position will determine his future with the team. His priority is to develop his own point guard and he is best positioned to do so with the drafting of a franchise point guard. The Lakers are at the point guard position where they are in a prime spot to draft a point guard. They have the next two draft slots, but the likelihood of them taking a point guard will be
