Orthogonal Templates: Add rectangles or other geometric shapes to your drawing using orthogonal edges. The edges determine the placement of the template, and you can adjust the angle at which the edge is drawn to match the angle of the paper or template. (video: 1:48 min.) New Scalable Bevel/Chamfer: Adjust the shape of a bevel or chamfer on an object with just a few clicks. Any existing bevels or chamfers are automatically updated, so you can continue working without breaking your design. (video: 1:17 min.) Bevel & Chamfer Tools: Improve your design with a suite of 3D bevel and chamfer tools. Draft your own geometry with the X-, Y-, and Z-Curve tools. Use the Circular Arc tool to perfect your angles and create curved surfaces. Design tessellations and grids in 3D, and quickly change the order in which they appear. Bevel/chamfer tools are available in the Utilities panel. Path Select and Breakout: Choose an area of a drawing to select and view its outline. Add vertices to create new shapes. Breakout is like a line tool, and allows you to break out or delete parts of paths. New Technology - Architecture Simplify complex procedures with a new built-in library of architectural tools. Use the new Sweep tool to quickly create an elevation or a 3D profile, or use the 3D viewport to measure and create new objects. Change the scale of your drawing to view objects at different scales, rotate a scene, and add and remove objects. (video: 1:51 min.)
