The Game This is a work that I was involved in during 2009 and got it ready for Steam in July 2010. Its a port of the PlayStation 2 game Resident Evil 4. This is a single player single player remake of RE4 with all known features being disabled (you can read more about this in the description). It is a great port as any other on its quality and the task was to make it look better while running on the lowest system requirements possible. If any system requirements are not met, it will display a message and be the responsibility of the user to change them to acceptable values. There are three essential changes. The easiest and most noticeable one is the resolution, which is far better than the original game. It is also around five times sharper and the colors are a bit brighter. The second change is the removal of sound effects and the non-portable music. Both are meant to allow the game to run on a small system, so there is no point in keeping them. The third change was to make the sounds fit with the new resolution. This way, games that were originally present in the PS2 port can be played because the system knows that it has been upgraded.Q: Using a OpenAPI document as base class I'm new to the OpenAPI idea and I've been through all the usual documentation (be it official or just StackOverflow posts). I have an API (which I don't own) but it is kinda like mine. Here are the specs: My question: Can I use this OpenAPI document to be the base for my API? (I'm not really asking for a "mockup" of the API, I'm just wondering if OpenAPI allows for that) Any link, tutorial or existing sample would be very appreciated. A: No. OpenAPI is not a specification for API design. You could take the OpenAPI specification and create an internal or external DSL that uses it to specify the API. That DSL can then be used to produce code as well as documentation. Or, you can take the specification and create an API design framework. OpenAPI is a framework. It allows you to do API design. Both of those options are equally valid. Neither of these options take the OpenAPI spec in isolation and replace it with something else. The various linked docs or
