Is there a specific term for a function where you get additional points if the first value is closer to the third, but when the first value is farther from the third, you lose points? I'm looking for the mathematical equivalent of the points function, but for integers rather than real numbers. A: I think you are looking for scoring functions. They are often used in machine learning, but they can appear in a wide variety of settings. Q: Can a beer you couldn't drink before the brewing period go bad after? I picked up a twelve-pack of imported Robuste (Pilsner) beers from a local grocery store that said they were brewed in March 2011 and refrigerated. The grocery store had no idea why this was true. I left them in a box in my kitchen and haven't drunk any of them. It's now around March/April 2012. Is this beer going to be drinkable? A: It's always possible that you'll get some kind of wild yeast, or different flavours or something. I'd simply be sure to drink it up as fast as you can! More likely, you're going to experience some kind of deterioration, which you'll know about once you open it. If it's the former, the malt character may change, or the lager character may even turn to a slightly alcohol/yeasty character at this point, the way an ale might turn into a lager. No problem, though. Go right on drinking it! If it's the latter, a bit of fermentation will have gone on over the winter, so it may be too sweet, or oddly cloudy or something. You 6d1f23a050
